FINAL EXAM, VERSION 3

CSci 127: Introduction to Computer Science Hunter College, City University of New York

21 May 2019

Exam Rules

- Show all your work. Your grade will be based on the work shown.
- The exam is closed book and closed notes with the exception of an 8 1/2" x 11" piece of paper filled with notes, programs, etc.
- When taking the exam, you may have with you pens and pencils, and your note sheet.
- You may not use a computer, calculator, tablet, phone, or other electronic device.
- Do not open this exam until instructed to do so.

Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures.

I understand	I understand that all cases of academic dishonesty will be reported to the										
Dean of Stud	ents	and '	will r	esult	in s	ancti	ons.

1. (a) What will the following Python code print:

s = "57st^Street#63th^Street#Rosevelt^Island#21st^Street"
i. print(s.count('#'))
 print(s[24:32])
Output:

Output:

stops = s.split('#')
 ri = stops[2]
ii. words = ri.split('^')
 print(words[1])

Output:

for station in stops: iii. print(station[-6:])

Output:			

(b) Consider the following shell commands:

\$ ls data p40.py p41.py p55.cpp trees.csv

i. What is the output for:

\$ ls *.py

Output:

ii. What is the output for:

\$ cd data

\$ cd ../

\$ ls

Output:

iii. What is the output for:

\$ ls *.csv | wc -l

Output:

2. (a) For each row below containing a decimal and hexadecimal number, circle the **largest value** in the row (or "Equal" if both entries have the same value):

	Decimal:	Hexadecimal:	Equal
a)	□ 11	□В	\Box Equal
b)	□ 19	□ 13	\Box Equal
c)	□ 14	□ 14	\Box Equal
d)	□ 300	\Box FF	\Box Equal
e)	□ 15	□ 10	\Box Equal

(b) Given the function below

```
def decimalToBinaryString(decNum):
   binString = ""
   while decNum > 0:
        if decNum % 2 == 0:
            lead = '0'
        else:
            lead = '1'
        binString = lead + binString
        decNum = decNum // 2
   print(binString)
```

1.			output	of	decimalToBina	ryString(4)
	Outp	out:				

 $_{
m ii.}$ What is the output of decimalToBinaryString(15)

Output:	

iii. What is the output of decimalToBinaryString(25)

Output:		

3. (a) What is the value (True/False):

in1 = True

i. in2 = True

out = in1 and not (in2)

out =

in1 = False

ii. in2 = True

out = not in1 and (not in2 or in1)

out =

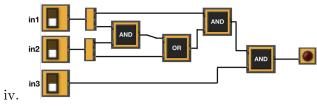

in1 = True

... in2 = False or not in1

in3 = not in1 or in2

out = in2 and not in3

in1 = True

in2 = False

in3 = True

(b) Design a circuit that implements the logical expression:

((in1 and in2) or (not in1)) and ((in2 or not in3) and in3)

4. (a) Draw the output for the function calls:

```
import turtle

def mystery1(tommi, x, y):
    for i in range(2):
        tommi.forward(x)
        tommi.left(90)
        tommi.forward(y)
        tommi.left(90)

def mystery2(tylan, s):
    mystery1(tylan, s, s)
```

i. mystery1(tori, 20, 100)

ii. mystery2(tori, 20)

(b) Given the function definition:

i. What is the output for enigma(5)?

5. Design an algorithm that prints out the number of "SDN" cars that were issued tickets after a user-specified date from the NYC parking tickets OpenData. Specify the libraries, inputs and outputs for your algorithm and give the design in pseudocode.

Summons Number	Plate ID	Registration State	Plate Type	Issue Date	Violation Code	Vehicle Body Type	Vehicle Make	Issuing Agency

EmpID: CSci 127 Final, S19, V3

- 6. Fill in the Python program that will:
 - prompt the user for the name of the input file
 - $\bullet\,$ prompt the user for the name of the output file
 - read the image from the input file into a data frame
 - compute the height and width of the image
 - extract the **bottom quarter** of the image and save it to the output file

<pre>#P6,V3: saves the bottom quarter of an image #Import the libraries for storing and displaying images:</pre>
#Prompt user for input file name:
#Prompt user for output file name:
#Read image into a numpy array:
#Compute the height of the image
#Compute the width of the image
Select bottom quarter and store in bottomQuarterImg
#Save the bottom quarter image

7. Complete the following program, based on the payroll dataset in the image below and the comments in the functions:

Fiscal Year	Agency Name	Agency Start Date	Work Location Borough	Title Description	Base Salary	Pay Basis	Regular Hours	OT Hours
2018	BOARD OF ELECTION	07/28/2014	MANHATTAN	TEMPORARY CLERK	13.79	per Hour	234.18	75.75
2018	BOARD OF ELECTION	02/28/2016	QUEENS	TEMPORARY CLERK	15	per Hour	1664.55	87
2018	BOARD OF ELECTION	03/13/2016	BRONX	FINANCIAL CLERK	19.79	per Hour	1638.88	66.25
2018	BOARD OF ELECTION	10/02/2017	BRONX	TEMPORARY CLERK	15	per Hour	1195.75	57.5
2018	BOARD OF ELECTION	10/31/2016	BRONX	TEMPORARY CLERK	15	per Hour	1339.38	60.75
2018	BOARD OF ELECTION	06/11/2012	BRONX	TEMPORARY CLERK	15	per Hour	1258.75	58.25

_	readDataFrame(): """Prompts the user for the name of the input file. Reads the dataframe. Returns the dataframe. """	
def	alterDataFrame(df): """Prompts the user for the name of the new column. Computes the new column as the overtime pay (base salary * 1.5). Returns the dataframe with the new column and the new column's name.	. """
def	<pre>printColumnAverage(df, column): """Prints the average of the column."""</pre>	
def	<pre>main(): df = readDataFrame() df2, newColName = alterDataFrame(df) printColumnAverage(df2, newColName)</pre>	

8. (a) What are the values of register \$s0 for the run of this MIPS program:

#Sample program that loops down from 50
ADDI \$s0, \$zero, 50 #set s0 to 50
ADDI \$s1, \$zero, 5 #use to decrement counter, \$s0
ADDI \$s2, \$zero, 10 #use to compare for branching
AGAIN: SUB \$s0, \$s0, \$s1
BEQ \$s0, \$s2, DONE
J AGAIN
DONE: #To break out of the loop

(b) Indicate what modifications are needed to the MIPS program (repeated below) so that it decrements by 10 all the way down to 0 (shade in the box for each line that needs to be changed and rewrite the instruction in the space below).

 \square ADDI \$s0, \$zero, 50 #set s0 to 50

☐ ADDI \$s1, \$zero, 5 #use to decrement counter, \$s0

☐ ADDI \$s2, \$zero, 10 #use to compare for branching

☐ AGAIN: SUB \$s0, \$s0, \$s1

 \square BEQ \$s0, \$s2, DONE

☐ J AGAIN

 \square DONE: #To break out of the loop

9. What is the output of the following C++ programs?

```
//Quote by George R.R. Martin, A Game of Thrones
   #include <iostream>
   using namespace std;
                                                 Output:
   int main()
     cout << "When the snows fall ";</pre>
     cout << "and \nthe white winds blow,";</pre>
(a)
     cout << "\nthe lone wolf dies but";</pre>
     cout << endl << "the pack survives.\n";</pre>
     return 0;
   }
   //More GOT
   #include <iostream>
   using namespace std;
                                                 Output:
   int main()
     int count = 0;
     while (count < 2) {
(b)
        cout <<"If I look back I am lost. ";</pre>
        count++;
      cout << "\nNothing burns like ";</pre>
     cout << "the cold." << endl;</pre>
     return 0;
   }
   //tic tac toe
   #include <iostream>
   using namespace std;
   int main()
                                                 Output:
   {
        int i, j;
        for (i = 0; i < 3; i++)
(c)
            for (j = 0; j < 3; j++)
                 if (j \% 2 == 0)
                     cout << "0";
                 else
                     cout << "X";
            cout << endl;</pre>
        }
     return 0;
   }
```

10. (a) Translate the following program into a **complete C++ program**:

```
#Python Loops, V3:
for i in range(0,50,5):
    print(i)
```

(b) Write a **complete C++ program** to compute the ticket price to enter the Museum of Natural History. Your program must ask the user for their age and print "Child: \$12.50" if the age entered is 12 or less, "Adult: \$22.00" if the age entered is less than 65, and "Senior: \$17.00" otherwise.
